

AUVESY releases versiondog 7.0

04.09.2019 07:16

versiondog 7.0 is now available for all customers in the download area.

The main enhancements are:

- completion Unicode support
- introduction AUVESY Image Service
- improvement of KUKA integration
- new feature "Component Upload"
- and much more...

Full details of what's new in versiondog 7.0 can be found in versiondog INFO in the section "[About versiondog](#)".

We also extend versiondog INFO with **video and audio tips**. Already available: Tips for configuring [TIA Portal Jobs](#).

We would like to point out that the **migration** or update **may take longer** than usual due to improved support for Unicode.

Please also note our **general recommendations for downloading and updating versiondog**, especially point 2 "[Update the server applications](#)".

If you have any technical questions, our support team will be delighted to help (Tel: +49 6341 6810 330).
